-------------------------------	---

Manufactured Under One or More of the following Patent Numbers: 3,211,336, 3,274,792, 3,393,839,3,517,860,  
3,739,842, 4,215,803,4,227,377, 4,300,359, 4,346,824  
Canadian Patent Numbers: 912,514 (10/72), 936,855 (11/73), 4,429,543, 4,921,149  
Other Patents Pending

# SAFETY PRECAUTIONS

**Always** disconnect power to the dispenser before servicing or cleaning.

**Never** place hands inside of hopper or gate area without disconnecting power to the dispenser. Agitator rotation occurs automatically when the dispenser is energized!

This ice dispenser has been specifically designed to provide protection against personal injury and eliminates contamination of ice. To insure continued protection and sanitation, observe the following

**ALWAYS** be sure the removable lid is properly installed to prevent unauthorized access to the hopper interior and possible contamination of ice.

**ALWAYS** be sure the upper and lower front panels are securely fastened.

**ALWAYS** keep area around the dispenser clean of ice cubes.

**CAUTION: Dispenser cannot be used with crushed or flaked ice. Use of bagged ice which has frozen into large chunks can void warranty. The dispenser agitator is not designed to be an ice crusher. Use of large chunks of ice which “jam up” inside the hopper will cause failure of the agitator motor and damage to the hopper. If bagged ice is used, it must be carefully and completely broken into small, cube-sized pieces before filling into the dispenser hopper.**

# GENERAL DESCRIPTION

The Remcor "DB" series of ice dispensers will solve ice and beverage service needs in the sanitary, space saving, economical way. Designed to be manually filled with ice from any remote ice making source, these dispensers will dispense cubes (up 1-1/4" in size), cubelets, hard-chipped or cracked ice and Scotsman MH750 pellet ice; and in addition, several flavors of post-mix beverages. "B" models contain beverage faucets **only** and must be supplied with cold product from any remote cold plate or refrigerated soda factory. "BC" models include beverage faucets and a cold plate and are designed to be supplied directly from the syrup tanks and carbonator, with no additional cooling required.

**IMPORTANT: For dispensing Scotsman "pellet" style ice (Model MH750 icemakers), REMCOR Kit #02234 Ice Diverter must be installed on the dispenser. (See INSTALLATION INSTRUCTIONS)**

**Table 1. Specifications**

Model:	<b>DB90S-BZ</b>
Ice Storage:	90 lbs.
Maximum Number of Faucets Available:	4
Built-in Cold Plate:	No
Electrical:	120/1/60 3A Cord Connected; 15A, 125V Plug
Dimensions:	16" W x 29-3/4" D x 32" H
Model:	<b>DB90S-B</b>
Ice Storage:	90 lbs.
Maximum Number of Faucets Available:	4
Built-in Cold Plate:	No
Electrical:	120/1/60 3A Cord Connected; 15A, 125V Plug
Dimensions:	16" W x 29-3/4" D x 32" H
Model:	<b>DB90S-BC</b>
Ice Storage:	90 lbs.
Maximum Number of Faucets Available:	5
Built-in Cold Plate:	Yes
Electrical:	120/1/60 3A Cord Connected; 15A, 125V Plug
Dimensions:	16" W x 29-3/4" D x 32" H

## LEGEND

<b>Z</b>	No sink option
<b>BC</b>	Beverage/Cold Plate System
<b>S</b>	All Stainless Steel
<b>B</b>	Beverage System

# INSTALLATION INSTRUCTIONS

1. Locate the dispenser indoors on a level counter top.

## COUNTER MOUNTING

The ice dispenser **must be sealed** to the counter. The template drawing indicates openings which must be cut in the counter. Locate the desired position for the dispenser, then mark the outline dimensions on the counter using the template drawings. Cut openings in the counter.

Apply a continuous bead of NSF *International* (NSF) listed silastic sealant (Dow 732 or equal) approximately 1/4" inside of the unit outline dimensions and around all openings. Then position the unit on the counter within the outline dimensions. All excess sealant must be wiped away immediately.

2. The beverage tubes, drain line and power cord are routed through the large opening in the bottom of the unit. See the MOUNTING TEMPLATE, for locating the required clearance hole in the counter for these utility lines.
3. SINK DRAIN ASSEMBLY: Connect the drain tube to an open drain. Additional drain tubing is provided with the unit. The drain line must continuously pitch downward away from the unit and contain no "traps" or improper drainage will result.
  - A. Use tube, clamp and insulation provided to assemble drain.
  - B. To assure proper drainage, do not allow "trap" to form in drain line. Be sure drain line runs flat with bottom of dispenser.
4. Connect the beverage system product lines as indicated in Figure 2 (and in Figure 3 for cold plate units). This work should be done by a qualified service person. Note that the hoses are marked with numbers ( 1 through 4 or 5) for **syrap connections** On 5 valve "-BC" units, the plain water is marked "NON CARB WATER".
5. Clean the hopper interior (see CLEANING INSTRUCTIONS).
6. Connect the power cord to a 120 volt, 60 cycle, 3-wire grounded receptacle.

**NOTE: Water pipe connections and fixtures directly connected to a potable water supply shall be sized, installed and maintained according to Federal, State and Local Laws/**

# KIT 03324 INSTALLATION INSTRUCTIONS

**NOTE:** For dispensing Scotsman NM 650 "nugget" style and MH 750 "pellet" style ice and Wilshire MCC500 and MCC700 compressed ice cubes.

1. Disconnect power to dispenser.
2. Remove upper front panel from dispenser.
3. Remove ice chute and discard Gate Restrictor.
4. Reinstall front panel and energize unit.

FIGURE 1. ICE DIVERTER

## GATE RESTRICTOR PLATE

---

**CAUTION:** Disconnect power to dispenser before installing, removing or adjusting restrictor

**FIGURE 2. GATE RESTRICTOR PLATE**

## ADJUSTMENT

---

This dispenser is provided with a gate restrictor plate, installed in its highest position. This plate adjusts the rate of ice flow from the dispenser. In applications using buckets, carafes or other large containers, the plate may be removed entirely for maximum ice flow. For glasses and cups, the plate may be adjusted downward to reduce the flow of ice. The best position depends on the type of ice being used and the size container and must be found by trial and error. Adjustment is made by loosening the upper two ice chute retaining nuts, sliding the restrictor plate to the desired position and re-tightening the nuts.

If the dispenser fails to dispense the ice when operated, check that the hopper has ice in it and that power is being supplied to the unit. If the problem persists, refer to the troubleshooting guide (page 16).

**NOTE:** 1) Shaded areas indicate openings in cabinet bottom needed for utilities and beverage tubing.

**FIGURE 3. MOUNTING TEMPLATE DB90S-B STANDARD**

**NOTE:** 1) Shaded areas indicate openings in cabinet bottom needed for utilities and beverage tubing.

**FIGURE 4. MOUNTING TEMPLATE DB90S-B & -BZ**

**NOTE:** 1) Shaded areas indicate openings in cabinet bottom needed for utilities and beverage tubing.

**FIGURE 5. MOUNTING TEMPLATE DB90S-BC**

NOTES:  
 1) SHADED AREAS INDICATE OPENINGS  
 IN CABINET BOTTOM NEEDED FOR  
 UTILITIES AND BEVERAGE TUBING.

# MAINTENANCE

The following dispenser maintenance should be performed at the intervals indicated:

## **DAILY** or as required

---

Remove foreign material from the vending area sink to prevent drain blockage.

## **WEEKLY** or as required

---

Clean vending area. Check for proper water drainage from the vending area sink.

## **MONTHLY**

---

Clean and sanitize the hopper interior (see CLEANING INSTRUCTIONS).

## **START-UP AND OPERATING INSTRUCTIONS**

---

Fill the hopper with ice. For “-BC” models with a built-in cold plate, dispense several large cups of ice (approximately 20 to 30 seconds total dispensing time) to allow ice to fill the cold plate. Add ice to the hopper as necessary to refill and replace the lid. Allow 10 to 15 minutes for the cold plate to cool down. Repeat this procedure whenever the dispenser has been standing overnight or other long periods without ice use. On “-B” and “-BC” models, start up the beverage system and adjust faucets to the proper brix. Contact your local syrup distributor for complete information on the beverage system.

In normal operation, pushing the ice dispenser lever will cause ice to flow from the ice chute. Ice flow will continue until the lever is released. Pushing the lever on any faucet will provide beverage of the appropriate flavor.

**CAUTION: Use caution to avoid spilling ice when filling dispenser. Immediately clean up any spilled ice from filling or operating the unit. To prevent contamination of ice, the lid must be installed on the unit at all times.**

# CLEANING INSTRUCTIONS

**WARNING: DISCONNECT POWER BEFORE CLEANING!** Do not use metal scrapers, sharp objects or abrasives on the ice storage hopper, top cover and the agitator disk, as damage may result. Do not use solvents or other cleaning agents, as they may attack the plastic material.

## DISPENSER

---

1. Clean the ice storage hopper at least once a month.
2. Lift off the agitator and the agitator disk. Wash with a mild detergent solution and rinse them thoroughly to remove all traces of detergent.
3. Wash down the inside of the hopper and top cover with a mild detergent solution and rinse thoroughly to remove all traces of detergent.
4. Replace the agitator.
5. Sanitize the inside of the hopper and agitator with a solution of 1 ounce of household bleach in 2 gallons of water. (200 PPM)
6. Replace the agitator disk. Sanitize as described in Step 5.
7. Remove Ice Chute cover as follows:
  - A. Flex sides outward to disengage lower pins.
  - B. Lift Ice Chute cover to disengage upper pins.
  - C. Lower Ice Chute cover down out of unit. Note: it may be helpful to twist cover slightly.
8. Clean the inside of the ice chute and ice chute cover with a mild detergent solution and rinse thoroughly to remove all traces of detergent.
9. Reverse steps above to reassemble ice chute.
10. Sanitize as described in Step 5.

## BEVERAGE SYSTEM

---

1. Remove faucet spouts, wash in mild detergent, rinse and replace.
2. Disconnect electrical power to the carbonator. Shut off the water supply and close the CO<sub>2</sub> regulator to the carbonator.
3. Disconnect the syrup tanks from the system.
4. Energize the beverage faucets to purge the remaining soda in the system.
5. Use a clean 5 gallon tank for each of the following.
  - A. **Cleaning tank** - fill with hot (120° - 140°) potable water.
  - B. **Sanitation Tank** - Fill with a chlorine sanitizing solution in the strength of 1 ounce of household bleach (sodium hypochlorite) to 2 gallons of cold (ambient) potable water (200 PPM).
6. Repeat the following procedure on each of the units' syrup product lines:

- A. Connect the cleaning tank to the syrup line to be sanitized and to the CO<sub>2</sub> system.
  - B. Energize the beverage faucet until the liquid dispensed is free of any syrup.
  - C. Disconnect the cleaning tank and hook-up the sanitizing tank to the syrup line and CO<sub>2</sub> system.
  - D. Energize the beverage faucet until the chlorine sanitizing solution is dispensed through the faucet. Flush at least 2 cups of liquid to insure that the sanitizing solution has filled the entire length of the syrup lines.
  - E. Disconnect the sanitizing tank. Hook-up the product tank to the syrup line and to the CO<sub>2</sub> system.
  - F. Energize the faucet to flush the sanitizing solution from the syrup line and faucet. Continue to draw on the faucet until only syrup is dispensed.
7. Repeat Step 2 in reverse order to turn on the carbonator. Dispense at least 1 cup of beverage from each faucet. Check taste. Continue to flush if needed, to obtain a satisfactory tasting drink.

# TROUBLESHOOTING GUIDE

Should your unit fail to operate properly, check that there is power to the unit and that the hopper contains ice. If the unit does not dispense, check the following chart under the appropriate symptoms to aid in locating the defect.

Trouble	Probable Cause
BLOWN FUSE OR CIRCUIT BREAKER	<ul style="list-style-type: none"> <li>A. Short circuit in wiring.</li> <li>B. Defective gate solenoid.</li> <li>C. Defective agitator motor.</li> </ul>
GATE DOES NOT OPEN.	<ul style="list-style-type: none"> <li>A. No power.</li> <li>B. Defective dispensing switch.</li> <li>C. Blown/defective fuse or jammed gate solenoid.</li> </ul>
GATE DOES NOT OPEN OR IS SLUGGISH. AGITATOR TURNS.	<ul style="list-style-type: none"> <li>A. Defective gate solenoid.</li> <li>B. Weak gate spring.</li> <li>C. Excessive pressure against gate slide.</li> </ul>
GATE OPENS. AGITATOR DOES NOT TURN.	<ul style="list-style-type: none"> <li>A. Ice solidified in hopper.</li> <li>B. Defective agitator motor.</li> <li>C. Defective capacitor.</li> </ul>
ICE DISPENSES CONTINUOUSLY.	<ul style="list-style-type: none"> <li>A. Stuck or bent push button (does not release switch).</li> <li>B. Defective dispensing switch.</li> <li>C. Improper switch installation.</li> </ul>
SLUSHY ICE. WATER IN HOPPER.	<ul style="list-style-type: none"> <li>A. Blocked drain.</li> <li>B. Unit not level.</li> <li>C. Poor ice quality due to water quality or icemaker problems</li> <li>D. Improper use of flaked ice.</li> </ul>
BEVERAGES DO NOT DISPENSE	<ul style="list-style-type: none"> <li>A. No 24 volt power to faucets.</li> <li>B. No CO<sub>2</sub> pressure.</li> </ul>
BEVERAGES TOO SWEET.	<ul style="list-style-type: none"> <li>A. Carbonator not working.</li> <li>B. No CO<sub>2</sub> pressure in carbonator.</li> <li>C. Faucet brix requires adjusting.</li> </ul>
BEVERAGES NOT SWEET ENOUGH.	<ul style="list-style-type: none"> <li>A. Empty syrup tank.</li> <li>B. Faucet brix requires adjusting.</li> </ul>
BEVERAGES NOT COLD (UNITS WITH BUILT-IN COLD PLATE)	<ul style="list-style-type: none"> <li>A. Unit standing with no ice in hopper, no ice in cold plate cabinet.</li> </ul>

Contact your local syrup or beverage equipment distributor for additional information and troubleshooting of your beverage system.

## SERVICE INFORMATION

**DANGER!** ELECTRIC SHOCK HAZARD. DISCONNECT POWER BEFORE SERVICING UNIT.

## SOLENOID ADJUSTMENT

WHEN REPLACING SOLENOID, ADJUST TO 7/8-INCH AS SHOWN BEFORE TIGHTENING MOUNTING SCREWS.
